

Swagelok® Hose Advisory Services (HAS)

This program combines our experience in hose advisory and management plans, with our extensive range of quality products. We can help you find real savings in the management of your hoses, increasing uptime and improving your bottom line.

Improperly installed and used hoses can lead to:

- Unplanned downtime
- Early failure/replacement of hoses
- Added costs due to waste or re-work
- Damaging safety incidents

Swagelok Hose Advisory Services extends the life and improves the performance of hoses in all applications.

By sharing our unmatched industry expertise in fluid system design, we give you the knowledge to help maximise the life of your hose. The benefits of this collaboration include:

Reduced Costs

The wrong hose, or the right hose improperly installed or used, can slow down your facility's production and you may not even be aware of how much time and money it's costing. These costs come from unplanned downtime, wasted man-hours, fluid waste or rework and inefficient operation of your facility.

Smarter Maintenance

Proper maintenance matters! Continuously replacing the same problem hoses after they fail leads to unplanned downtime and wasted people-hours. Swagelok Hose Advisory Service maximises the hoses you already have, utilising regular inspections and a preventative maintenance schedule, delivering ongoing plant maintenance savings.

Increased Safety

One safety problem can affect your business more than you may realise. It could mean injuries to your team, there is budget required to fix it along with people-hours to carry out the work. So why risk it? Keep your plant and processes safe, predictable, and dependable with a leak-tight product and value-added training from Swagelok Hose Advisory Services. You and your maintenance crew will learn the fundamentals of fluid system safety and best practices to reduce the risk of injuries and environmental damage.

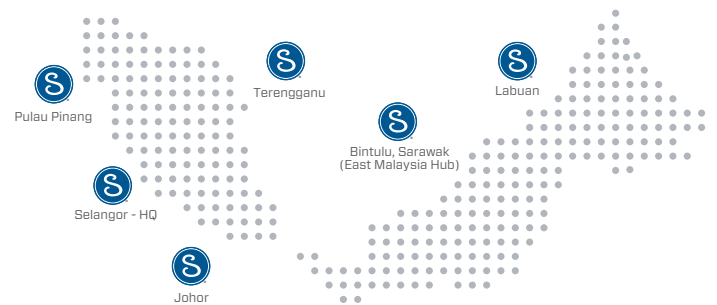

What to expect from a Swagelok hose advisory services survey

Failed hose assemblies require time and **resources you just don't have. Be prepared** by taking a preventative approach **with help from Swagelok Hose Advisory Services.**

The Swagelok Hose Advisory Services team partners with you to focus on preventative maintenance and system optimisation with our on-site survey process that includes:

- A thorough discussion of your facility's goals, where we learn the ins and outs of your facility.
- An on-site visual analysis of all hose systems, including their installation, placement, and interaction within the facility.
- A report that details overall findings, prioritised improvement recommendations and suggestions with replacement options. We'll also provide preventative maintenance schedules and hose inspection recommendations for your specific facility.
- A hose register update with our survey findings or creation of a new database, depending on your facility's needs.
